

GÄSTE IM VERLAUF DES BERICHTSJAHRES

DR. MITCH SADAR

BrainARC-Philadelphia, USA

»I am writing to thank you for the excellent course I recently attended on the HBI method of brain analysis. I appreciate that your method is based on cutting edge research and methodology. Your prior and ongoing consultation, together with this course will allow us to implement this method in our office in the US. There is simply no other method available to us that combines questionnaires, qEEG analysis, ERP analysis and evidence based clinical indexes. Thank you for all of your efforts.«

DR. ANGELIKA SADAR

BrainARC Philadelphia, USA

»The method enables the integration of psychology and neurobiology and promotes the understanding of processes that were previously invisible to diagnostics. Our experts here attest the method a high degree of scientificness and clarity with regard to possibilities and limits.«

DR. ANDREA MECKLEY

BrainARC North Carolina, USA

»The clinical work has become richer with the addition of the HBImed method. The insights from the evoked potentials can be very well combined with neuropsychological methods. The indexes provided are particularly significant. These make the diagnostic work much easier.«
